STRATEGIC PLANNING & GOAL SEEKING

Display all your financial data – balance sheet, profit and loss, cash flow and business drivers – on a one-screen financial scorecard.

Immediately generate and track all critical financial ratios including gross margin, profitability, working capital, cash flow, cash after operations, ROCE, and highlight variances between periods.

Apply 'what-if' scenarios to forecast the consequential net change to financial statements, elements and business drivers. For example, what if outstanding receivables were reduced from 70 to 65 days?

Perform multiple 'what-if' simulations to develop a complete strategy for future business improvement. Use the 'what-if' monitor to track and report each tactic and element of change.

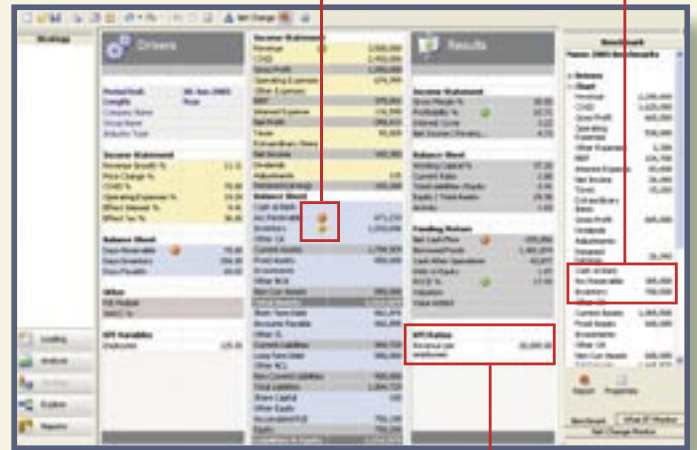

Develop strategies by inputting realistic operational changes in order to achieve your desired goal.

The goal seek function enables you to define specific financial objectives for key results and ratios. Optimist 7 will outline the steps required to achieve these goals. Evaluate and forecast strategic business decisions before implementation. For example, "what strategies can be employed to improve cash flow?"

Use the projection function to perform multiple-year projections and create budgets and forecasts in just two keystrokes. From the strategy screen, review target goals for both balance sheet and profit and loss statements, set anticipated environmental and market condition changes, click projection and immediately produce next year's budget.

Traffic light indicators immediately highlight variances from set benchmarks.

Keep track of your own ratios customised to your business.

NEW TO OPTIMIST 7... Benchmarking

Apply industry averages and selected benchmarks to track your performance with 'traffic light' indicators. Use the goal seek function to identify the strategies required to achieve benchmark outcomes for your business.
